

MVC Summary

**The main benefit of MVx is
decoupled UI logic**

Extract UI Logic Into Standalone Class

Activities, Fragments

Standalone class

Benefits of MVC

Decoupled UI logic

Multiple strategies for reuse of UI and application layer logic

Optional boost to unit testability by extraction of standalone controllers

No additional dependencies

Easy integration with dependency injection

Standardization of the codebase

Drawbacks of MVC

Initial learning curve

Unfamiliar

More code...?

**Our industry rejected lines of code as
productivity or quality metric long ago**

**The most mature, versatile and battle-tested
architectural pattern for Android development**

MVC framework?

Is MVC better than other MVx?
